EXPERIENCE

Janium.ai

Jan 2026 – March 2026

Software Developer

US (Remote)

- Built frontend dashboard with Zapier-like visual interface for LinkedIn and email automation workflows using **React.js**/Next.js
- Developed Rust **Backend** with GraphQL API and Rust actors for LinkedIn automation at scale
- Integrated Xpra-based browser automation for headless LinkedIn session management and interaction orchestration

KingIT Solutions

March 2024 – January 2026

Software Engineer

Hungary (Remote)

- Architected high-availability Rust **Backend** systems utilizing **DevOps tools** like Kubernetes for orchestration and horizontal scaling
- Engineered prediction market DApp using Chainlink oracles/automation with 99.9% uptime on **EVM** chains
- Optimized smart contract **Gas Estimations** and consumption by 25% through storage layout restructuring
- Built customer care call automation services using Python/**FastAPI** with conversational AI pipelines
- Fine-tuned LLM models using **PyTorch** for domain-specific inference, improving response accuracy for client workflows

Onchain VC

Feb 2022 – Dec 2023

Software Engineer (Blockchain, AI)

London (Remote)

- Spearheaded development of 15+ **EVM** DApps (interacting with **ETH** and **ERC 20 Tokens**) using Next.js/**React.js** frontend and **Node.js Backend** with PostgreSQL/Redis
- Deployed AWS infrastructure supporting 50K+ monthly active users across staking/swapping protocols, utilizing various **DevOps tools**
- Pioneered AI-DApp integration using LLM fine-tuning (LoRa/QLoRa) for 40% faster inference
- Developed cross-chain Telegram bots (**EVM/Solana/APTOS**) handling 100k monthly requests

Pepped Ones

Jan 2019 – Jan 2022

Fullstack Developer

Trivandrum

- Built scalable REST APIs (**Backend**) with Express.js/**Node.js** and MongoDB serving 10K+ daily requests
- Contributed to **React.js**-based frontends improving user engagement by 35%
- Developed Web3 applications with Solidity smart contracts for decentralized finance platforms on **EVM** chains
- Created and maintained blockchain indexing services for on-chain data analysis

PROJECTS

Remawt 🎬 | *LangGraph, FFmpeg, Remotion, BullMQ, Node.js*

- Built a motion graphics video generation platform for automated product video creation using AI-driven pipelines
- Designed LangGraph-based orchestration workflows for scene planning, asset generation, and video composition
- Implemented Remotion-based rendering pipeline with dedicated VPS rendering nodes for high-quality video output
- Engineered BullMQ job queue system for reliable async video rendering, progress tracking, and horizontal scalability

Mentiq Analytics 📊 | *Golang, PostgreSQL, TimescaleDB, Redis, React.js, Next.js, Claude SDK*

- Solely architected and built a full-stack analytics platform with high-performance Go **Backend** for event ingestion and processing
- Implemented time-series data storage using PostgreSQL with TimescaleDB extension for efficient analytics queries at scale
- Designed message queue system for reliable event processing, buffering, and horizontal scalability
- Developed lightweight SDKs for **React.js** and Next.js enabling seamless client-side event tracking integration
- Built real-time analytics dashboard with customizable metrics, funnels, and user behavior insights
- Built Agentic realtime paid user tracking to reduce churn. Also churn prediction models and feature tracking.

Prawler | *Python, FastAPI, Gemini, Ollama, nodriver, Chrome Ext.*

- Built an AI-powered stealth social media automation and outreach system with a custom browser automation framework utilizing computer vision to resist UI changes
- Orchestrated cross-platform automated workflows for LinkedIn, X, and Reddit, integrating email outreach pipelines
- Engineered human-behavior simulation and robust session management with residential proxy rotation and encrypted cookie persistence
- Developed a unified FastAPI dashboard for pipeline monitoring

Chatqik | *TypeScript, Node.js, PostgreSQL, Qdrant, Mastra, Vercel AI SDK*

- Built an intelligent, multilingual customer support chatbot for WhatsApp and web interfaces, leveraging Retrieval-Augmented Generation (RAG) over product documentation
- Designed a 7-step Mastra AI orchestration workflow pipeline featuring triage, robust safety guardrails, and human agent escalation
- Integrated Whisper for speech-to-text capabilities and implemented persistent conversation history alongside robust rate limiting
- Deployed a resilient backend architecture using Express.js, Drizzle ORM, and Docker Compose to serve English and Malayalam user queries
- Deployed a system to generate QWen3-TTS to generate voice messages from custom voice clones.

ReelsFly | *Next.js, Python, FFmpeg, Stable Diffusion, TTS*

- Built end-to-end AI video generation platform enabling users to create videos using open-source video generation and image editing models
- Developed Story Mode feature that automates the entire content creation pipeline: storyboard generation, scene composition, video synthesis, and audio generation
- Integrated multiple AI models for image editing, video generation, and text-to-speech synthesis
- Designed intuitive dashboard for managing video projects with real-time generation progress tracking

Cido API Service | *Rust, Axum, Docker, Kubernetes*

- Implemented a secure Rust **Backend** API service that handles crate uploads, validates builds in isolated Docker containers, and manages deployments to Kubernetes using **DevOps tools**
- Built authentication system with JWT tokens and protected routes for managing deployments of Cido maps
- Created CI pipeline that replaces public dependencies with private crates, executes builds in sandboxed environments, and pushes validated images to GitLab registry
- Developed REST endpoints for crate deployment lifecycle including upload, build, deploy and status monitoring

EDUCATION

College of Engineering Trivandrum

BTech Electrical and Electronics Engineering - CGPA - 8.38 (First class)

Trivandrum, Kerala

SKILLS

- **Languages:** Rust, Golang, Typescript, JavaScript, SQL, Python, C, C++, C, Huff
- **Web Technologies:** **React.js**, Next.js, **Node.js**, Nest.js, Express.js, Flutter, Actix, Axum, Redux, Tailwind, Gin, Remotion, FastAPI, Chrome Extensions
- **Blockchain:** Solidity, Foundry, Hardhat, Ethers.js, **EVM**, **Solana**, **ERC20**, **Gas Estimations**, Web3.js
- **Backend & Databases:** Rust (Actix, Axum), Go (Gin), Python (FastAPI), Node.js (NestJS, Express), PostgreSQL, TimescaleDB, MongoDB, Redis, Prisma, Supabase, BullMQ, Kafka, SQLite, Qdrant, Drizzle ORM
- **DevOps & Tools:** Docker, Kubernetes, Linux, Git, AWS, GCP, Azure, Xpra, SendGrid, Apify
- **AI/ML:** PyTorch, Langchain, Langraph, LlamaIndex, Claude SDK, LoRa, Fine tuning and Quantisation, Gemini, Ollama, Mastra, Vercel AI SDK, Whisper, MLFlow, ZenML, Huggingface
